1. **On the video/photo/other page**, copy the HTML **EMBED** code of the video.

2. **Now in the Wordpress post editing window**, place your cursor where you want your video to appear and just type [HTML1] - Here is what things should look like.

3. **Create a custom field using key HTML1** and paste the HTML code that you’ve copied from Youtube in the Value field on the right. Here is what things will look like.

   ![Custom Field Example](image)

   Do not forget to click Add Custom Field.

4) **Done.** If you check your post you will see that the video or other object you have embedded appears correctly and reliably inside your published page. Try it for yourself.
